Sonnet tests: Wolt in Finland

Addendum to the accuracy test. Same 10 questions, same day. Housedge, 26 October 2026.

In one paragraph. We tested Claude Sonnet 5.5 in two jobs. **As the reader** of answers it agreed with Haiku on every tracked brand and every tone, so Haiku stays: it is 20 times cheaper and just as good for the dashboard numbers. **As the engine** that answers the questions, Sonnet was 59% cheaper than Opus but gave **out-of-date facts**: it presented Foodora as an active option in all 7 answers that named it, while Foodora left Finland in February 2026 (confirmed by Helsinki Times, STT and Affärsvärlden). Opus, which cited about four times as many web sources, reported the closure in 5 of 10 answers. The engine model changes *what Housedge measures*, so it is a product decision, not just a cost decision.

Opus engine, 10 answers
$1.91
$0.191 per answer · 24.8 sources per answer

Sonnet engine, 10 answers
$0.79
$0.079 per answer · 5.5 sources per answer

This addendum's tests cost
$0.98
Sonnet engine + Haiku and Sonnet readers

1. Why the first report showed no drastic change

The new reading does not change **whether** a brand is counted when its name is plain (Wolt, Foodora, Uber Eats): simple word matching already did that, so visibility stayed at 90 / 70 / 70%. It changes the numbers that need understanding: tone, rank and which competitors appear. For a client, the one change that matters most in this test is Foodora (from “positive” to “closed”). The bigger accuracy levers are elsewhere: **which engine model asks the questions** (this addendum) and **how many times each question is asked**.

2. Test A: Sonnet as the engine (asking the questions)

	OPUS 5.5 (TODAY)	SONNET 5.5
Cost for 10 answers	**$1.91**	**$0.79 (59% cheaper)**
Web sources cited per answer	24.8	5.5
Answers saying Foodora has left Finland	**5 of 10**	**0 of 10**
Wolt named in	9 of 10	9 of 10
Foodora named in	7 of 10	7 of 10
Uber Eats named in	7 of 10	5 of 10

What Sonnet told users: “Foodora is the main alternative.” “Add Foodora if you live in a big city and want to compare prices.” **What is true:** Foodora announced on 13 February 2026 that it would end its Finnish service on 27 February 2026, affecting about 80 employees (Helsinki Times; STT press release; Affärsvärlden). Opus found and reported this; Sonnet did not search enough to find it.

How each engine's answers treated Foodora and Uber Eats (read by Haiku). Roles: recommended / listed / compared / warned against / passing.

QUESTION	FOODORA, OPUS	FOODORA, SONNET	UBER EATS, OPUS	UBER EATS, SONNET
What are the best food delivery apps in Finland?	**warned against, negative**	listed, positive	recommended #2, positive	listed, neutral
Which food delivery apps would you recommend in Finland, and why?	**warned against, negative**	listed #2, mixed	recommended #2, mixed	not named
What are the most trusted food delivery apps in Finland?	**passing, negative**	recommended, positive	listed #2, mixed	listed, neutral
What are the most affordable food delivery apps in Finland?	recommended #1, positive	listed, neutral	not named	listed, mixed
What should I look for when choosing food delivery apps?	not named	not named	not named	not named
What are the best alternatives to Wolt?	listed, positive	listed, neutral	listed, positive	listed, positive
Is Wolt any good? What do customers say about it?	not named	not named	compared, neutral	compared, neutral
What are the pros and cons of Wolt?	not named	not named	not named	not named
Is Wolt or Foodora better in Helsinki?	**passing, negative**	listed, mixed	listed, neutral	not named
Which apps deliver groceries in Helsinki?	**warned against, negative**	listed, mixed	listed, neutral	not named

3. Test B: Sonnet as the reader (understanding the answers)

Sonnet re-read the same 10 Opus answers. We scored Haiku's readings against Sonnet's with the evaluation tool. This measures **agreement between two AI readers**, not truth; the human-labelled answer key is still needed for a true accuracy figure.

MEASURE	TRACKED BRANDS (WOLT, FOODORA, UBER EATS)	ALL BRANDS NAMED
Found the same brands (F1)	**100%**	80% (Sonnet found 32 extra, Haiku 4)
Same tone	**100% (kappa 1.00)**	92% (kappa 0.87)
Same role	**78% (kappa 0.69)**	86% (kappa 0.82)
Same rank	**identical**	identical (rank is read from the text by code)
Cost for 10 answers	Sonnet $0.179 · Haiku about $0.009 (about 20 times cheaper)	

Sonnet's extra brands were mostly mentioned in passing (supermarket chains, parent companies), which are not counted in the dashboard. Kappa above 0.8 is near-perfect agreement; 0.6 to 0.8 is substantial, about what two human labellers reach.

Where the two readers disagreed on tracked brands

ANSWER	BRAND	SONNET SAID	HAIKU SAID
1	Foodora	warned against	passing
6	Wolt	compared	passing
8	Foodora	warned against	passing
9	Wolt	recommended	listed
10	Foodora	listed	warned against

Four of five disagreements are about Foodora having closed: is that a “warning” or a “passing mention”? Neither label fits. **Fix:** add one role, *“not available”* (closed, discontinued or not offered in this market). It removes most disagreement and is the most useful thing to tell a client about a competitor.

4. Decisions

1. **Keep Haiku as the reader.** Same results as Sonnet on everything the dashboard shows, at a twentieth of the cost.
2. **Do not switch the engine to Sonnet yet.** It saves 59% but reports a closed competitor as the main alternative. Before choosing, test whether Sonnet at a higher effort setting searches enough to find current facts (about $1 for the same 10 questions).
3. **Cut cost with frequency instead:** weekly checks cost one quarter of daily and do not change what is measured.
4. **Add the “not available” role** to the reader, then re-measure agreement.

5. **Tell clients which model asks the questions**, because the answer depends on it.
